

0.250" Rise 45 Degree Offsets

The Brouwer 0.250" Rise 45 Degree Offsets are designed to work in concert with standard height Back Up Iron Sights (BUIS), and the B.E. Meyers MAWL. BUIS provide the shooter with the most dependable solution available. When real-world unforeseen consequences arise, optics fog or freeze, and batteries die. They will always perform as expected.

The offsets provide the specific rise necessary for the BUISs to clear the top of the MAWL providing a clear line of sight.

The offsets are designed with a minimal Picatinny footprint, occupying only one rail slot, to provide flexibility in mounting.

Made from heat treated 4140 Chromoly, and nitride coated for a robust finish and dependable durability. Specifically designed to maintain zero from impacts.

Because of the additional rise, the Offsets provide an ergonomic advantage to all in one 45-degree offsets. With AR pattern carbines and rifles, as the platform is rotated about the receiver extension the sight line over the bore remains the same, thus speeding up the transition time from primary to secondary aiming.

Sold as a pair. Back-up iron sights not included.

Recommended for use with:

Magpul MBUS Pro LR

Ultradyn C4 Sight System

Compatible with other brands with similar dimensional sight height, profile, and mounting.

Colors: Black Nitride	MSRP: \$225
---------------------------------	-----------------------

Nightforce ATACR fog frosted in shooting position. BUIS immediately were required to make the shot.
